AB Aqueous solns. of diterpenes such as Forskolin, its congeners, analogs and derivs., up to approx. 6% concentration, are prepared using suitably substituted

cyclodextrin as a solubilizing agents. In the absence of cyclodextrin, some diterpenes such as Forskolin are soluble in water only to concns. of about 0.001%. Such aqueous solns. find applications in topical and systemic use, as pharmaceutical, cosmetic, nutritional prepns. containing diterpenes such as Forskolin and congeners. Thus forskolin (98.5 % assay, 25 mg) was added to 1 mL water containing in the dissolved state 500 mg hydroxypropyl  $\beta$ -cyclodextrin, HPBCD, (50%); the suspension was agitated at 75 RPM in an isothermal shaker for 60 h at temperature 30°C. Resulting solution was filtered through 0.45  $\mu$ m nylon filter and analyzed for the content of Forskolin by HPLC 1.33 mg/mL or 0.133 % w/v.

AB The invention relates to a composition comprising **hydroxycitric acid** (HCA) in combination with either one or both of **garcinol** and anthocyanin, and its use as a weight-loss therapy in animal subjects, preferably humans. The therapeutic effects for the composition observed in murine and human studies include a reduction in total body weight and body mass index, a reduction in body **fat**, an increase in **lean body** mass and content of body water, and a reduction in perceived appetite level. Another composition for use in weight-loss therapy is also described relating to forskolin in combination with either one or both of **garcinol** and anthocyanin. The anti-oxidant properties of **garcinol** are described as being enhanced in the presence of HCA and anthocyanin, and the combination of HCA, **garcinol** and anthocyanin is also shown to exert greater citrate lyase-inhibiting properties than either compound alone. Methods of obtaining HCA, **garcinol** or anthocyanin, or a composition containing all three compds., are described.

AB The present invention is directed to microbicidal compositions containing a microbicidal formulation or agent and methods of use thereof for preventing the transmission of or treating sexually transmitted infections and/or common vaginal infections, while minimizing disruptions to vaginal ecology and epithelium. In a preferred embodiment, the microbicidal formulation or agent is ciclopirox olamine. These compositions are preferably encapsulated in the form of a foam, cream, wash, gel, suppository, ovule, lotion, ointment, film, tablet, foaming tablet, tampon, vaginal spray, or aerosol. Preferably the concentration of microbicidal agent is approximately 0.01% to approximately 50% by weight, more preferably between approximately 0.1% to approximately 28%, and most preferably between approximately 0.5% and approximately 5%.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The invention teaches that supplementation with (-)-**hydroxycitrate** constitutes a novel means of reducing inflammation and is useful for preventing, treating and ameliorating conditions involving inflammation. The discovery that HCA has inflammation-moderating effects allows for the creation of novel and more efficacious approaches to preventing and ameliorating cardiovascular diseases, cancer, arthritis and a variety of other conditions that involve excessive inflammation. Inasmuch as one element common to advancing years is an increased level of generalized inflammation, the invention further lends itself to reducing or delaying this aspect of aging, one factor in what is known as sarcopenia. Furthermore, this discovery makes possible the development of adjuvant modalities which can be used to improve the results realized with other treatment compounds while at the same time reducing the side effects normally found with such drugs. HCA delivered in the form of its potassium salt is efficacious at a daily dosage (bid or tid) of between 750 mg and 10 grams, preferably at a dosage of between 3 and 6 grams for most individuals. A daily dosage above 10 grams might prove desirable under some circumstances, such as with extremely large or resistant individuals, but this level of intake is not deemed necessary under normal conditions.

AB I have discovered cosmetic or topical pharmaceutical compositions for external body part or organ slimming, firming, cellulite reduction, **fat**-reduction, and **obesity** control benefits that are in synergistic combination with benefits for the treatment of skin aging, skin wrinkles reduction, skin exfoliating, treatment of acne, treatment of rosacea, age-spots reduction, skin surface whitening, skin surface brightening striae distensae (stretch marks) reduction, treatment of pimples, treatment of skin infections and lesions, spider veins reduction, blood microcirculation (venous insufficiency) improvement, UVA/UVB protection of skin, and skin redness reduction. These compositions thus provide multiple combinations of skin and external body part or organ enhancement benefits that can be selective and specific for external body parts and organs such as face, chin, cheeks, arms, "love handles" in abdomen area, eye lids and eye zone, neck, breasts, thighs, and hips. These compositions include a body beneficial composition selected from certain nutraceutical, cosmetic, and pharmaceutical ingredients, a composition to promote collagen and

elastin synthesis in the skin, and a cosmetically or pharmaceutically acceptable delivery system.

AB A method for making the potassium, sodium and other hygroscopic salts of (-)-**hydroxycitric** acid and mixtures thereof workable by initial treatment with a desiccating agent, such as fumed silicon dioxide. These may be further rendered non-hygroscopic and non-reactive in acidic media via subsequent encasement in hydrophobic and acidophobic polymers. The calcium and magnesium salts of (-)-**hydroxycitric** acid likewise can be rendered nonreactive in acidic media. The resulting products are suitable for tableting, encapsulation and use in other dry media for **weight loss**, appetite suppression, improvements in **fat** metabolism and postprandial lipemia and other pharmaceutical purposes. Further, the products of this invention can be made nonreactive as components of acidic liquid drink mixes and snack bars and can be used in the production of controlled release administration formats.

(-)-Erythrohydroxycitric acid  
TITLE (FRENCH): Procédé de préparation de (-)-erythrohydroxycitrate de  
calcium  
TITLE (GERMAN): Verfahren zur Herstellung von Calcium  
(-)-Erythrohydroxyzitrat  
INVENTOR(S): Sharma, Nina, Lupin Lab. Ltd. Nat. Pro. Div., 159  
C.S.T. Road, Kalina, Santacruz (East), Mumbai - 400

098, State Of Maharashtra, IN; Parashuraman, Meena,  
 Lupin Lab. Ltd. Nat. Pro.Div., 159 C.S.T. Road,  
 Kalina, Santacruz (East), Mumbai - 400 098, State Of  
 Maharashtra, IN; Raman, Girija, Lupin Lab. Ltd. Nat.  
 Pro. Div., 159 C.S.T. Road, Kalina, Santacruz (East),  
 Mumbai - 400 098, State Of Maharashtra, IN

PATENT APPLICANT(S): Lupin Limited, 159 C.S.T. Road, Kalina, Santacruz  
 (East), Mumbai 400 098, Maharashtra, IN

PATENT APPL. NUMBER: 4100380

AGENT: Harrison, David Christopher, et al, MEWBURN ELLIS York  
 House 23 Kingsway, London WC2B 6HP, GB

AGENT NUMBER: 31532

LANGUAGE OF FILING: English

LANGUAGE OF PUBL.: English

LANGUAGE OF PROCEDURE: English

LANGUAGE OF TITLE: German; English; French

DOCUMENT TYPE: Patent

PATENT INFO TYPE: EPB1 Granted patent
